LinkedIn: Ali Abdo | GitHub: Ali Abdo | Portfolio: Ali Abdo

I am a data-focused analyst with hands-on experience turning raw operational data into clear, actionable reporting — spanning SQL, Excel, and Power BI dashboards in a live remote role, alongside a First-Class Computer Science degree and a growing portfolio of independent data projects. Comfortable working across messy, real-world datasets, translating findings for non-technical stakeholders, and picking up new tools quickly.

EXPERIENCE

Data Analyst | **Scafflinq** — *Remote* *Jun 2024 – Jul 2026*

- Built and maintained Power BI dashboards to monitor business performance, customer activity and platform usage.
- Used SQL and PostgreSQL to extract, join and aggregate data for recurring reports and ad hoc analysis.
- Developed ETL workflows to consolidate application, billing and CRM data, processing API and JSON data and automating preparation with Python and pandas.
- Cleaned and validated datasets through deduplication, missing-value handling, standardisation and reconciliation; investigated reporting discrepancies.
- Analysed onboarding funnels, customer cohorts, feature adoption and engagement, including usage before and after product releases.
- Tracked subscription revenue, active tag usage, retention and churn, alongside inspection completion trends and overdue inspections.
- Worked with product, sales and customer support stakeholders to define KPIs, respond to data requests and present findings and recommendations.
- Documented data sources, metric definitions and transformation logic; maintained SQL queries and analysis scripts using Git.

PROJECTS

Retail Sales & Customer Insights Dashboard | **SQL, Excel, Power BI**

- Cleaned and modelled a public retail transactions dataset using SQL, structuring it for reliable reporting.
- Built an interactive Power BI dashboard surfacing sales trends, top-performing products and customer segments.
- Documented data sources, assumptions and refresh logic for reproducibility.

Data Pipeline & Transformation Project | **dbt, SQL, PostgreSQL**

- Built a dbt project transforming raw relational data through staging and modelled layers into clean, tested tables.
- Wrote SQL-based data tests and documentation to ensure transformation reliability.
- Applied version control (Git) throughout to track model changes.

Marketing Campaign A/B Test Analysis | **Python, pandas, Statistical Testing**

- Analysed a public A/B test dataset using Python and pandas to compare campaign performance.
- Applied hypothesis testing to determine statistical significance of observed differences.
- Presented findings and a clear recommendation in a written summary.

GravityIQ – Football Analytics Platform | **React, Node.js, Python**

- Built a full-stack analytics platform combining data from multiple sources into a single analytical view.
- Designed an original statistical metric (the Gravity Index) and validated it using regression and hypothesis testing.
- Built interactive dashboards and visualisations (radar charts, positional maps) to present findings clearly.

EDUCATION

Royal Holloway, University of London — Egham, UK *Sep 2023 – Jul 2026*
Computer Science BSc: First-Class Honours
Courses: Software Engineering, Algorithms and Complexity, Security Management, Operating Systems, Database Systems, Project Management

Uxbridge College — London, UK *Sep 2021 – Jul 2023*
BTEC Level 3 National Extended Diploma Information Technology: D*DD
Courses: Creating Systems to Manage Information, Big Data and Business Analytics, Cyber Security, IT Service Delivery

TECHNICAL SKILLS

Data & Analytics: SQL, Excel, Power BI, Python, R, dbt, statistical testing, data cleaning & validation
Languages: Python, Java, Dart, JavaScript, SQL, R, HTML/CSS/Sass
Tools & Frameworks: Git/GitHub, React/Next.js, Node.js, Firebase, MongoDB, Visual Studio Code, Figma, SCRUM, Agile

CERTIFICATES

Microsoft — Data Analysis with SQL, Excel & Power BI
British Airways — Data Science Job Simulation
